PROFILE SUMMARY

Python Developer with 2.5+ years of experience in web data collection, data extraction, browser automation, and ETL workflows. Skilled in Python, Selenium, BeautifulSoup, Requests, SQL, MongoDB, HTML, JSON, XML, and API integration for building scalable data pipelines. Experienced in handling dynamic and static websites, optimizing SQL queries, validating large datasets, and troubleshooting automation workflows while delivering clean, reliable, and business-ready data.

SKILLS

- Programming Languages: Python, PHP, SQL
 - Data Extraction: HTML, JSON, XML, REST APIs
 - Database Management Systems: MySQL, PostgreSQL, MongoDB
 - SQL Validation & Data Quality: Accuracy Checks, Error Handling
 - Dynamic website handling: pagination, CAPTCHA Awareness
 - Tools: Git, GitHub, VS Code, Postman, Excel
- Web Scraping & Automation: Selenium, BeautifulSoup, Requests, cURL, cloudscraper
 - Data Processing: Pandas, NumPy, Data Cleaning, EDA
 - HTTP & Networking: Sessions, Cookies, Headers
 - ETL & Data Pipelines: Data Cleaning, Transformation, Automation
 - Business Intelligence: Power BI, DAX, Power Query, Dashboard Development
 - Soft Skills: Problem Solving, Time Management

WORK EXPERIENCE

- Data Engineer (Python & PHP) | ITSYS Solutions Pvt. Ltd.**

Sep 2023 – Present

 - Designed and deployed automated **Python-based web data extraction** and browser automation pipelines using Selenium, BeautifulSoup, and Requests to collect large-scale data from dynamic and static websites.
 - Built and maintained scalable ETL workflows to collect, clean, validate, transform, and store structured and unstructured web data for downstream analytics.
 - Extracted and processed data across multiple domains including restaurant, grocery, pharmacy, and fuel station platforms (US & international).
 - Stored, managed, and optimised extracted data in MySQL, PostgreSQL, MongoDB, CSV, and Excel formats to support downstream analytics.
 - Improved data accuracy and reliability by performing SQL-based validation, manual quality checks, and consistency audits.
 - Optimized scraping performance by handling pagination, login sessions, cookies, headers, and rate limiting mechanisms.
 - Debugged scraping failures, monitored logs, and implemented error-handling strategies to ensure uninterrupted data pipelines.
 - Collaborated with internal teams to understand data requirements and deliver clean, reliable datasets on time.
 - Developed interactive Power BI dashboards using SQL/Excel datasets, KPI cards, DAX measures, slicers, and drill-through reports.
- **Projects | Restaurant & Food Chain Data Extraction**

Clients: Taco Bell, KFC, Domino's, Subway (US & France), Denny's, IHOP, Burger King, Etc.

 - Designed and executed large-scale web scraping solutions to extract store locations, menus, operating hours, and available services from official brand websites.
 - Extracted structured data from HTML pages, REST APIs, JSON responses, and dynamic websites using Python automation and stored it in MySQL databases.
 - Ensured high data quality by implementing deduplication logic and record validation checks before delivery.
 - Supported business analytics by providing clean, accurate, and consistently updated datasets.
 - Optimized scraping scripts by handling pagination, login sessions, cookies, and rate limits.
 - Debugged scraping failures and ensured data reliability and consistency.
- **Projects | Grocery & Pharmacy Data Scraping**

Client: Good Neighbor Health

 - Extracted product listings, pricing details, and availability data from grocery and pharmacy platforms.
 - Cleaned, transformed, and normalized large datasets using Pandas for downstream processing and reporting.
 - Improved data usability by handling missing values, formatting inconsistencies, and duplicate records.
 - Used Pandas to clean, normalize, validate, and prepare datasets before loading them into reporting workflows.
 - Created Power BI dashboards to visualize product pricing trends and support reporting.

❑ Projects | Fuel Station & Store Hours Data Extraction

Clients: Rutters, KFC

- Collected fuel station, convenience store, and business timing data from multiple web sources.
- Automated periodic scraping workflows to ensure up-to-date datasets with minimal manual intervention.
- Maintained data consistency and reliability through scheduled updates and validation checks.
- Built Power BI reports for fuel pricing analysis and operational insights.

EDUCATION

Master of computerapplication (MCA)

Dr. APJ Abdul kalam Technical University, Lucknow, U.P.

Year of Passing: 2024
